FLOWER AND PLANT MANAGEMENT

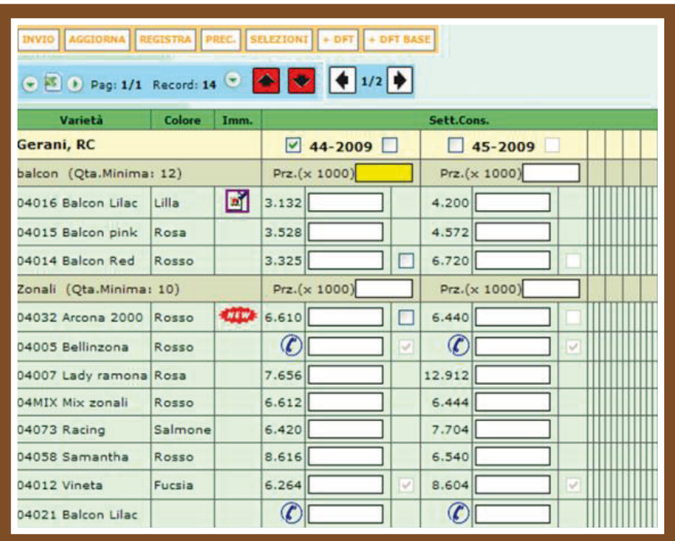
The new software ERP(Enterprise Resource Planning), written in Java™ and technologically advanced, multilingual, easy, fast, intuitive and completely modular. Even in Cloud version is perfectly suited from small enterprises to large demanding multinational companies, finding the right place in terms of cost/benefit.



Example of input
Orders from the diagram - Fig.1

SOME DETAILS:

Example of order insertion from the diagram (fig.1): With choice of 2 or more weeks of delivery. Ability to match images to each displayed product by clicking on the image. View the availability of each product with ability to order on request (phone symbol).

Use the application also to external users: The application, being used by the web, is the same for both internal users and for external users (agents, direct customers ..). By customizing the application menu and by the permissions to the various functions and options in each application you can use to make all users (internal and external) the same programs, but in different ways. For example, not to allow the agents to be able to modify certain information, but only to view them.

According to various types of users we have specific menus and assign specific permissions to the use of all functions of the program. Even enabled agents and customers can run, insert and query their data without the need of the company to send paper statements (statistics, account statements, fees, shipping in progress ..).

FLOWER AND PLANT MANAGEMENT

WHY USE CODICE01:

- **Accessible to small and medium-sized enterprises**

Every entreprise is unique, this is why we offer a complete portfolio of business intelligence solutions and business management designed to adapt to your business strategy and your budget.

- **Specifically designed for your company**

Codice01 solutions for small and medium-sized enterprises are designed to be completed, providing breadth and depth of functionality required for your company, easy to use, thanks to the rapid adoption that does not require any installation on the client, minimal training and flexible, as all applications are scalable and adaptable to the progressive growth of your company. Each offered solution is based on knowledge that 01 Informatica Srl Company has learned from over 30 years of experience and collaboration with the best companies.

- **Easy deployment and maintenance**

Our solutions, from the house accessible to those in the cloud with monthly subscription, can be deployed in a few hours, adapted and customized by our extensive network of qualified technicians. We will follow the process with you step by step, before and after the start-up, making sure that the implementation is a success.
